

# EDM-700-9C

**J.P. Instruments NOW BRINGS YOU THE SAME PRECISION PERFORMANCE OF THE EDM SERIES INSTRUMENTS IN A NINE CYLINDER--DIGITAL AND ANALOG VERSION!**

Made Just for your vintage aircraft or **WARBIRD!**

A few years ago, JPI created what civil aviation pilots had long been waiting for... a digital and analog EGT/CHT EDM-700 Scanner®.....

Now JPI once again stunned the world of aviation with its new 7,8, and 9 cylinder EDM-700-9c. This new EDM opens the door to a new range of engine data management by having the capability to scan and display all 7, 8, or 9 cylinders of a radial engine simultaneously, and functions just like the standard EDM series instruments. Please refer to the EDM-700 page for complete details on all the functions that make this unique instrument the one that you want to use to save you money, and protect your investment!

Another revolutionary feature of the nine cylinder EDM-700 is the ability to interface with a palmtop or laptop computer, to provide you with instantaneous engine data results and performance ratings. This gauge functions like an [EDM-700 basic](#), but with nine cylinder capability. JPI's NEW EDM-700 is sure to realize the largest all around economic benefit of any purchase made for your airplane.

It may not look like an analog gauge from the 1940's but it will fit in the same hole, and in the long-term, the EDM will save you tens of thousands of dollars on costly engine repairs and maintenance on those expensive and difficult to find engine parts. You'll also save fuel, engine maintenance costs, and assure yourself of maximum efficiency and precision engine performance! Once again, brought to you by the leaders in engine data management!

**JPI is the only company that offers you a nine cylinder EGT/CHT bar graph configuration!**
