

LED Toe Kick Light

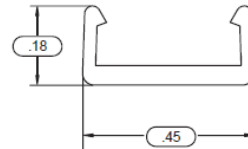

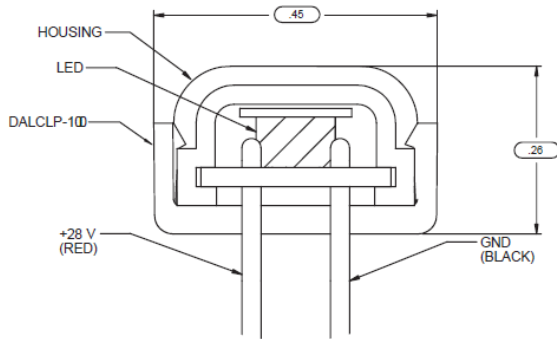

TKLXXX-XX

Toe kick lights provide elegant accent lighting in those hard to see locations, and can offer a consistent warm or cool color in individual part lengths ranging from only a few inches to over 36". (Please refer to table on back for complete offerings.) Easily installed with our DALCLP-100 mounting clips, the TKLxxx series has LED's spaced at every 0.5". Electronics are protected inside a housing preventing inadvertent contact by installers or customers, protecting your investment. In addition to the wide variety of parts offered, many elements can also be pre-formed at the factory for a slight additional charge - avoiding the need to have parts bent during installation, which could harm the electronic assemblies. Simply contact Heads Up at info@heads-up.com and provide us the desired radius, and your specified length.

LED Toe Kick Light

TKLXXX-XX

Electrical Specifications

Voltage Input.....28VDC
 Current.....See Table 1

Mechanical Specifications

Weight.....See Table 1

Dimming / Controllers

All Toe Kick lighting can be connected directly to 28VDC. If dimming is required a controller can be installed to provide variable and step dimming. See CLC450 / 500 data sheets for dimming module information.

Optical Specifications

Warm and cool options are available. Color code required on customer purchase order. If not specified the default will be 01 (warm). See color code table for more options.

Color Code Table		
Color	Color Code	Color Temp
Warm	01	3500K
Cool	02	5700K

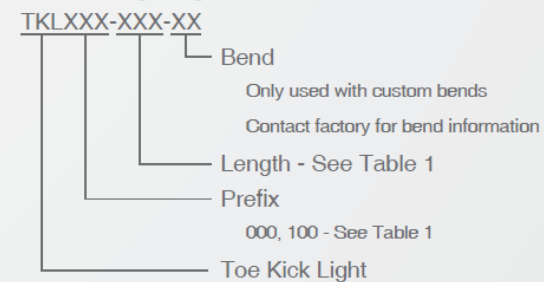

Environmental / Certification

DO-160D Env. Cat. [A2X]BAB[SB]XXXXXXXXZZAXX[XXX]
 X[XXXX]XXX

Mounting Options

All Toe Kick elements mount to plastic snap in style mounting clips. The clips can be ordered by using part number DALCLP-100.
